Approved boilerplate

> Zabibu Technika is an AI and technology company based in Nairobi, Kenya. Founded in 2006 as Grape Technologies, it builds sovereign, local-first software, edge AI models, and operating systems for Africa and the global South.

Most software is designed for fast fibre, the newest laptop, a card on file, and a model that speaks English first. Zabibu Technika builds for the actual condition: software that works offline, models that fit a modest machine, interfaces that respect local language and low bandwidth, and systems that keep data with the person who made it.

The studio combines a 20-year research heritage with shipping consumer products: Zabibu Arif, Arif Agent, Zabibu Weaver, Ella, Ustadi, Zabibu OS, Sigana, Phosh.cpp, Fikra Edge Runtime, Zabibu Canary, and the Fikra model lineup.

02 / FOUNDER & PRODUCTS

The through-line.

Founder

Tehillah Mwangada Kachila founded the studio in Nairobi in 2006 as Grape Technologies and leads its research and product work across local-first AI, edge inference, and sovereign operating systems.

> "Founded on curiosity. Driven by intelligence. Zabibu Technika is the evolution of a dream that began in 2006 — built not by consuming the leftovers of Silicon Valley, but through persistent research, deep discipline, and a commitment to software that breathes."

Product portfolio

Zabibu Arif

WORKSPACE & ASSISTANT

Your main workspace and assistant for writing, planning, coding, and organizing daily work, powered by the Fikra Engine.

Arif Agent

AGENTIC EXECUTION

Arif's hyperspecialized sibling for real-world agentic execution, embedded inside Zabibu Arif.

Zabibu Weaver

OPEN-SOURCE AGENT

A free, open-source, model-agnostic agent that works with any AI model you choose.

Ella

JOURNAL & CARE

An encrypted private journal and care companion for thoughtful daily reflection.

Ustadi

SKILLS & MASTERY

A specialized assistant for building, mastering, and elevating practical real-world skills.

Zabibu OS

OPERATING LAYER

An elemental web-native, local-first operating layer for a smooth, unified computing environment.

Sigana

MEDIA & STREAMING

A free, zero-login TV and streaming service built for low-bandwidth networks.

Phosh.cpp

EDGE INFERENCE

An open-source llama.cpp adapter for edge devices, optimizing speed, thermal management, and context distribution.

Fikra Edge Runtime

ENTERPRISE RUNTIME

The proprietary runtime used internally to power and manage Fikra models with local data sovereignty.

Zabibu Canary

PRE-RELEASE TESTING

A pre-release channel that checks code impact across five critical setups with signed human-in-the-loop evidence.

Fikra Model 1 - 2B

LOCAL MODEL

A pioneering 2-billion parameter model built for local execution and edge devices.

Fikra Model 2 - 4B

ADVANCED MODEL

A 4-billion parameter model with deeper training, code-switching, local grounding, vision, and advanced tool use.

03 / PRESS ASSETS & CONTACT

Use the brand accurately.

The media kit contains wordmarks, app icons, product marks, wallpapers, brand colours, typography, usage rules, and the official tune. The full asset library is at **zabibu.vercel.app/assets**.
